Allowance

The following is an examiner's statement of reasons for allowance:

The prior art made of record fails to explicitly disclose a process for manufacture an optical transmission element comprising the process steps of applying a filling compound, in a liquid state, intermittently to the optical waveguide wherein the optical waveguide is fed into an extruder to form a slow element around the waveguide; thereby forming a plurality of dry, compressible elements that are disposed about the optical waveguide.

Rowland's reference discloses applying the filling compound in the liquid state and after the curing process the liquid filler becomes dry and compressible elements around the waveguide. However, Rowland's cable is formed by a loose tube process and not through an extruder.

Polle discloses extruding the optical cable with filler compound, however, the filler compound is not applied as a liquid state and cured to become dry and compressible filler. Furthermore, Polle's filling process is partially filling the interstices of the cable rather than intermittently filling the interstices along the longitudinal direction of the cable.

Examiner finds substantial differences in the two prior arts and finds no motivation to combine the two manufacturing processes that would result in applicant's claimed invention.

Through a search update, examiner found the art of Kundis et al. (WO 2005025842 A2) to teach the same subject matter as the instant application. However, Kundis's reference does not precede the instant application's priority date.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
